

Rotorrail

Vortok's ultra-reliable RotorRail Switch Rollers are so quick to install that they eliminate the need for possession time. They reduce friction on the switch to such a degree that no maintenance is required.

Rotorrail

Reduced Switch Maintenance

- No possession time required: installs in 20-30 minutes per switch
- Can be retro-fitted to almost every existing switch so no special fixings required
- Maintenance-free: baseplates do not require lubrication
- No special tools required: units use existing baseplate screws
- Increase switch reliability: reduction in wear and tear
- Affordable solution with significant cost savings for operator
- Energy saving: motor power can be turned down and motor life extended
- Eliminates the environmental impact of regular greasing
- Cannot be incorrectly set and require no adjustment as they operate on a fixed height lift
- Range of designs to suit vertical, shallow depth, bullhead, switch diamond and other baseplate designs
- Suitable for UK switch lengths A-H
